cancer

This invention relates to a new human antibody specific for human interleukin-12 (IL-12). The invention also includes antigen binding portions that bind to IL-12. Sequences B39485-B39516 represent human

anti-IL-12 antibody heavy and light chain complementarity determining

Other variable region amino acid sequences are given in B39517-B39560 and B40068-B40149. Sequences B39561-B39771 CC represent anti-IL-12 CDR3 related amino acid sequences B39561-B39772-B40063 CC represent other CDR sequences. Light chain CDR3 consensus sequences are given in B40064-B40067. Primers used in the identification and CC construction of the antibodies of the invention are given in C61062-C61071. The antibody of the invention is a neutralising antibody CC and has antirhemmatic; antiarthritic; antisclerotic; antiplammatory; CC antibacterial and immunosuppressive activity. The antibodies or CC cantibacterial and immunosuppressive activity. The antibodies or CC antibacterial activity and contact of the contact
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             used in the manufacture of a pharmaceutical composition to treat human

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes a novel polynucleotide (I) (and complements and hybridizable polynucleotides) comprising a contiguous nucleotide sequence coding for a human antibody with factor VIII specificity which has hemostatic activity. (I) is useful a primer or probe for detecting the presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilia A patients. This sequence represents the human factor VIII antibody A3-G1 specific scFv protein DP-31 which is used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example 8; Fig 9A; 6lpp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is that of the heavy chain variable (LC VR) region of murine antibody ldfb. This sequence was aligned with 11 other known antibody LC VRs and a set of framework positions of surface exposed amino acid residues was determined. This information can be used in a method to determine how to modify a rodent antibody or fragment by resurfacing in order to produce a humanised rodent antibody. Residues (determined from alignment) at positions 118, 120, 122, 126, 127, 128, 130, 131, 133, 135, 145, 160, 161, 162, 183, 184, 186, 187, 195, 196, 197, 208, 209, 210, 212 (numbered from the N-terminal of the complete heavy chain) are accessible residues. None of the entire combinations of surface residues in the murine sequences were found in the human sequences and vice versa.
                                                                                                                                                                     DNA fragment comprising human immun production of human immunoglobulin
sequences encoded by novel isolated genes. The genes (Q78939-79002) were solated and cloned from a series of cosmid constructs: Y202; Y103; Y21; Y6;Y24; 3-31; M84; M118 and M131, by PCR amplification using primers Q78917-38. The genes are subdivided into 5 families of Vh genes. The fragments cover a region of 800 kb. The DNA fragments were isolated from high molecular weight DNA from human placenta. The DNA was partially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          04-AUG-1995 (first entry)
                                                                                                         Protein sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                This sequence represents a VH domain complementarity determining region (CDR) from an antibody specific for estradiol. The invention relates to specific binding members (sbp) comprising a polypeptide that comprises an antibody antigen binding domain (AABD) which has a dissociation constant of less than 1.0x10^-8M for estradiol, and a dissociation constant of at least 500-fold higher for the steroid hormones selected from estriol,
            used for monitoring estradiol levels, e.g. during the menstrual cycle, hormone replacement therapy and for diagnosing oestrogen secreting tumours. The sbps can provide for discrimination between estradiol and
                                                              testosterone, dihýdrotestosterone, progesterone, estriol-3-sulphate estriol 3-beta-di-glucuronide, where the polypeptide comprises an antibody vH domain. The spbs can be used in an immunoassay for determining the presence or absence of estradiol in a sample. They contains the presence or absence of estradiol in a sample.
                                                                                                                                                                                                                                                               Claim 1; Column 25-26;
                                                                                                                                                                                                                                                                                                       New specific binding partners for estradiol, used for monitoring estradiol levels during the menstrual cycle, in hormone replacement thereney and for dispension pastrones especially themselves.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         menstrual cycle; horn diagnosis; VH domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Estradiol; complementarity determining region; CDR; estriol-3-sul antibody antigen binding domain; steroid hormone; estriol; testos dihydrotestosterone; progesterone; estriol 3-beta-di-glucuronide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        were ligated with ClaI-digested cosmid vector pJB81. The ligation products were in vitro packed and infected into E.coli 490A. The fragments were then subcloned by colony hybridisation. The Vh genes and the DNA fragments encoding them are useful in producing human immunoglobulin in mammalian hosts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                digested with TaqI restriction enzyme. The fragments were separated by gel elecrophoresis and 35-45 kb fractions were collected. The fragments

                                                                               Matches
                                                                                                                                  Sequence
                                                                                                                                                            hybridizable polynucleotides) comprising a contiguous nucleotide sequent coding for a human antibody with factor VIII specificity which has hemostatic activity. (I) is useful a primer or probe for detecting the presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilia A patients. This sequence represents the human factor VIII antibody A3-C1 specific scFv protein B35 which is used
                                                                                                                                                                                                                                                This invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention describes a novel polynucleotide (I) (and complements and hybridizable polynucleotides) comprising a contiguous nucleotide sequence coding for a human antibody with factor VIII specificity which has hemostatic activity. (I) is useful a primer or probe for detecting the presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilla A patients. This sequence represents a fragment of the human factor VIII antibody heavy than variable region protein B35 of the invention of the human factor VIII antibody heavy than variable region protein B35 of the first sequence of the protein B35 of the human factor VIII antibody heavy than variable region protein B35 of the first sequence of the protein B35 of the first sequence of the protein B35 of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New polynucleotide, polypeptide and antibody useful for diagnosing presence of neutralizing antibodies against factor VIII and for treatment of hemophilia A patients with these antibodies \cdot

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is a novel anti-human tumour necrosis factor alpha (TNF-alpha) antibody (Ab) heavy chain variable region. The Ab dissociates from TNF-alpha with a Kd of 1x10 power -8 M or less and has a Koff rate constant of 1x10 power -3 s power -1 or less (both determined by surface plasmon resonance), and neutralises human TNF-alpha cytotoxicity in a standard in vitro L929 assay with an IC50 of 1x10 power -7 M or less. The Ab, which inhibits TNF-alpha activity, can be used to treat sepsis, autoimmune diseases, e.g. rheumatoid arthritis, Theumatoid autoimmune diseases, e.g. rheumatoid arthritis, Theumatoid

DNA fragment comprising human immunoglobulin Vh production of human immunoglobulin in mammalian genes hosts for

Protein sequences (R66295-51) are novel human immunoglobulin heavy chain sequences encoded by novel isolated genes. The genes (Q7839-79002) were isolated and cloned from a series of cosmid constructs: Y202; Y103; Y21; Y6;Y24; 3-31; M84; M118 and M131, by PCR amplification using primers (Q78917-38. The genes are subdivided into 5 families of vh genes. The fragments cover a region of 800 kb. The DNA fragments were isolated from high molecular weight DNA from human placents. The DNA was partially digested with TagI restriction enzyme. The fragments were separated by gel elecrophoresis and 35-45 kb fractions were collected. The fragments were ligated with ClaI-digested cosmid vector pB881. The ligation products were in vitro packed and infected into E.coli 490A. The fragments were then subcloned by colony hybridisation. The Vh genes and the DNA fragments encoding them are useful in producing human immunoglobulin in mammalian hosts.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   cc sequences, corresponding to human secreted proteins. Y6451 to Y65438 C represent the EST-related proteins corresponding to Z42265 to Z43052. CC The 5° ESTs can be used for producing secreted human gene products. CC They can be used to identify and isolate 5' untranslated regions (UTRs) CC and upstream regulatory regions which control the location, development CC stage, rate, and quantity of protein synthesis, as well as stability of control the location, development CC mRNA. The ESTs are also useful as probes for chromosome mapping, and to CC procedures to identify individuals, or in diagnostic procedures to CC identify individuals having genetic diseases resulting from abnormal CC The nucleic acids encoding signal peptides can be used for directing CC extracellular secretion of a polypeptide or the insertion of a cell. The proteins encoded by the EST sequences may be useful in treating a CC variety of human conditions. Secreted proteins have therapeutic value, CC and the identification of new secreted proteins is valuable. Z42249 to CC 242264 and Y66404 to Y66650 represent sequences used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

The colon cancer antigen polynucleotides, proteins and antibodies to the proteins are useful for the prevention, treatment and diagnosis of colon disorders, such as colon cancer. The polynucleotides may be used in diagnostics and research, such as for chromosome identification, and as hybridisation probes. The proteins may also be used to prevent diseases such as neural disorders, immune system disorders, muscular disorders, renal disorders, infectious diseases, and cardiovascular disorders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The cell line 3D6 (87110301; Porton Down) produces a MAb of the IgG1/Kappa type that reacts specifically with HIV-1 gp41 and also weakly cross-reacts with HIV-1 gp120. Gene construct sc3D6 was engineered using the variable region coding regions of the heavy and light chains of antibody 3D6, joined by a linker. The recombinant protein binds to HIV gp160. See also Q20066 and Q20067.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recombinant protein which binds to complex viral antigen and HIV-1 - contains variable region of antibody derived from 3D6 cell line, used for detecting HIV-1 antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             W09118983-A.

The recombinant protein binds to HIV gp160.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides the coding and protein sequences for a number of human immune system associated proteins (HISAPS). These can be used in the diagnosis and treatment of various autoimmune disorders, infections and cell proliferation diseases. The diseases include AIDS, adult respiratory distress syndrome, anaemia, asthma, atheroscierosis, Crohn's disease, irritable bowel syndrome, multiple sclerosis, myasthenia gravis, osteoarthritis, rheumatoid arthritis, scleroderma, systemic lupus erythematosus, arteriosclerosis, cirrhosis and cancer.

                                                                                                                                                                                                                                                                                       Complementary determining regions (CDRs) of a parental murine class complementary determining regions (CDRs) of a parental murine class III anti-carcinoembryonic (CEA) MAb engrafted to the framework regions (FRs) of a heterologous antibody which can be derived from C any species including human, retain the anti-CEA binding specificity of the parental murine MAb but are less immunogenic in a human C subject than the parental MAb. The humanised antibodies can be used in diagnosis, imaging and therapy of CEA-producing cancers and C patients receiving the humanised antibodies and conjugates show improved therapeutic results, decreased immune responses and decreased immune responses and confused immune responses and the decreased immune responses and confused. This sequence corresponds to the first framework region of the heavy chain of the humanised MAb. See R97313-97333.

Ig heavy chain V region - human
C:Species: Homo sapiens (man)
C:Date: 13-Jan-1995 #sequence_revision 13-Jan-1995 #text_change 23-Jul-1999
C:Accession: S44115
R:Hawkins, R.E.; Zhu, D.; Ovecka, M.; Winter, G.; Hamblin, T.J.; Stevenson, F.K. submitted to the EMBL Data Library, March 1994
A:Description: Idiotypic vaccination against human B-cell lymphoma :rescue of vaccense number: S44105
A:Reference number: S44105
A:Status: preliminary
A:Molecule type: DNA
A:Residues: 1-97 <HAW>
A:Cross-references: EMBL:Z31384; NID:g472969; PIDN:CAA83259.1; PID:g940526
C:Superfamily: immunoglobulin V region; immunoglobulin homology
C:Keywords: heterotetramer; immunoglobulin
anti-SS-A/Ro 60K peptide heavy chain E-56 - human (fragment) C;Species: Homo sapiens (man) C;Date: 07-Jul-1997 #sequence_revision 29-Aug-1997 #text_change 21-Jan-2000 C;Accession: PC4281 R;Suzuki, H.; Takemura, H.; Suzuki, M.; Sekine, Y.; Kashiwagi, H. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       88
